

Cyril, Fred, Sylvain, Denis – Olli, Narsi 2022-11-05

- Arrival at 1h15, clouds. S2 will be out for the weekend.
- Standby because of the clouds.
- UT8h00: fringes STS LR
 - recording dark LR
 - kappa LR
 - fringes LR after fine recentering 22760/18437/13726/11346/6946 (including foreground)
 - Spectral cal (Neon gain=3, DIT=20ms) → saturation. Maybe some reflection somewhere to be checked. Can we reduce the flux of the Neon Lamp?
 - Dark
- UT9h10 we decide to open on a bright target, gam Ori with E1W2W1E2
- Fringes E1=-0.36, E2=-0.10, W1=-0.42
- Seeing is not very good. We focus on W1W2 but nothing seen on SPICA. Fringes are not very good on MIRCx too.
- UT11h20 new alignment. But clouds coming again.
- Different attempts on SPICA-FT to solve the communication issues between SPICA-FT and MIRCx, to solve the decoding of the configuration (again...). Hard to lock with the very bad conditions encountered tonight.
- At 13h30 we decided to close.
- More activities on STS for software activities.
